QUALITY ARCHERY DESIGNS | 2018

//////////////////////////////////// AMERICA'S ARCHERY ACCESSORIES //////////////////////////////////////

QAD

/AMERICAN MADE

Quality Archery Designs has been manufacturing exceptional and innovative archery products since 1992. Quality is not just in our name, it's our mission. We continually strive to provide customer service which is second to none. We understand that our success is directly tied to our customers' satisfaction and the commitment of being responsive to their needs.

Although archery is something we love and is a field in which we will continue to strive to be an industry leader, God and our families are our passion. As a company that holds these strong core values, we are committed to carrying them out by treating our customers like family. We take pride in manufacturing our own products in Madison Heights, Virginia, where we provide hardworking Americans with rewarding jobs.

"We're not interested in selling a high volume of mediocre products. Our goal is to produce only the best products. We have even built that ideal into the name of our company. It means a huge deal to us when customers choose to spend their hard-earned money on QAD products. Not taking this for granted, we hold each and every rest to precise tolerance specifications and strict quality control before leaving our facilities. I love to climb into a tree stand after work and unwind as I enjoy God's beautiful creation."

ULTRAREST®

SMART REST TECHNOLOGIES™

/WHY ULTRAREST?

The arrow rest is arguably the most important accessory on today's modern bow. Traditionally, the arrow was held in place by a stationary rest, sometimes allowing the fletchings to strike, greatly reducing accuracy. Bow hunters and competition shooters alike needed something dynamic. They needed something that could give them accuracy shot after shot. Then came the ULTRAREST. The ULTRAREST® totally contains your arrow, even in the harshest conditions. It then drops away at the perfect time to give your arrow complete fletching clearance. Check out these technologies found only on the ULTRAREST®.

/HOW IT WORKS.

1. LOADING YOUR ARROW

Simply nock your arrow and cock the launcher into capture position using the thumb wheel lever. The launcher is now in the capture position (80°) and is ready to draw.

2. FULLY CONTAINED

With Total Containment Technology™, you never have to worry about your arrow falling off the rest. The ULTRAREST® knows to drop away ONLY when fired, not at slow let-down. If you draw back and can't get that "perfect" shot, let down and the launcher remains in the capture position.

3. PERFECT RELEASE!

When the bow is fired, the launcher drops out of the way. With VDT technology™, the launcher passes the capture position and continues into the drop-away position using speed and timing, NOT inertia.

4. LOCKED DOWN

When the launcher falls, LDT technology™ locks it down in the drop-away position. This guarantees no bounce back and total fletching clearance. It also allows for higher spring tension and clearance on bows shot at over 400fps.

VELOCITY DROP AWAY

Using speed and timing, the ULTRAREST® knows to drop away ONLY when the bow is fired, not at slow let-down. If you draw back and can't get that "perfect shot," let down and the launcher remains in the capture position, keeping your arrow fully contained.

LOCK DOWN TECHNOLOGY

Keeps the launcher in the drop-away position with no bounce back, allowing total fletching clearance at over 400fps.

ANTI-VIBRATION

Carefully chosen materials help reduce noise and vibration, making ULTRAREST® one of the quietest drop-aways on the market. Laser cut felt provides a deadly silent draw.

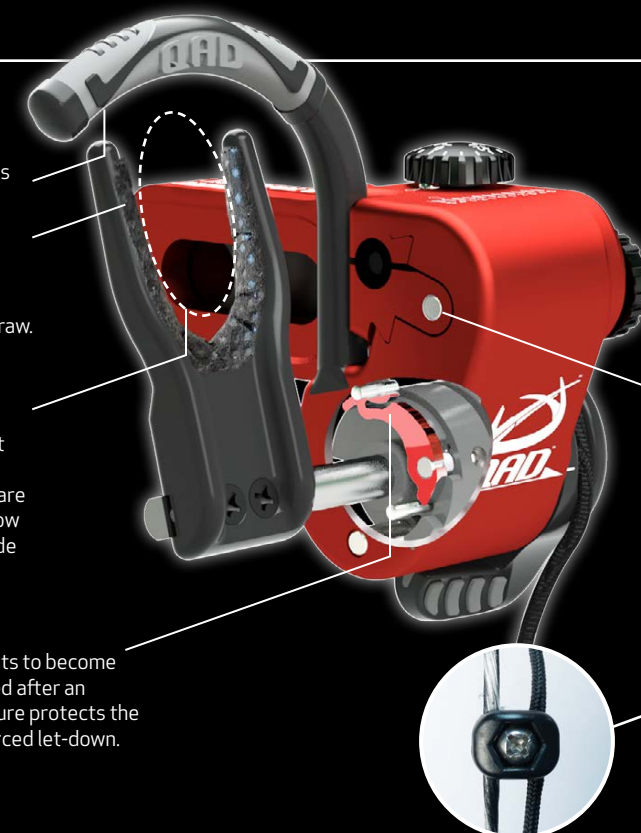

TOTAL-CONTAINMENT

While in the capture (80°) position, the arrow cannot fall off of the rest. The capture bar and launcher are designed to hold your arrow in all scenarios, even upside down or slow let down!

SAFETY BREAK-AWAY

It is common for other rests to become damaged if the bow is fired after an improper setup. This feature protects the ULTRAREST® against forced let-down.

MICRO-CLICK

For each click, the rest will adjust 1.9 thousandths of an inch!

ANTI-BACKLASH

Patent pending anti-backlash technology removes slop from the threads. This means that every click means an adjustment -no guessing!

EZ-CLAMP

No serving or bow press required. This clamp is small, lightweight, and can be setup at the shop or in the field.

ULTRAREST / CUSTOM®

/TRUSTED BY THE INDUSTRY'S
LEADING BOW MANUFACTURERS

We have partnered with the world's leading bow manufacturers to bring you rests that have been custom designed specifically for their bows. Trying to make a rest that fits all bows has many benefits, but you can't beat the performance, fit, and look of a rest that has been tailored to match your bow. With each rest designed bow-specific, we were able to cut out unnecessary weight, parts, and adjustments, allowing us to achieve quicker tuning times than ever before. Experience each bow's optimal performance!

ULTRAREST / MXT®

GORE™
OPTIFADE™
CONCEALMENT

/PRECISION TUNING AT ITS FINEST.

The ULTRAREST® MXT has taken micro-adjust rests to a whole new level of quality and precision. It's the only drop-away with a true precision click adjustment. In fact, it's so precise, that with each click, the rest will fine adjust vertically or horizontally just 1.9 thousandths of an inch. With precision tuning capabilities, anti-backlash technology, and extreme tolerances, the MXT is the only rest that will truly allow you to experience the maximum capabilities of today's high performance bows. Even with more features packed into the MXT than any other rest, the MXT still sports a sleek and extremely

lightweight design, weighing in at only 2.9oz. The MXT allows you to precision tune broadhead flight and accurately shoot distances you never thought were possible. With the ability to effortlessly precision tune your bow, you will have an unfair advantage over the competition. This rest is no exception to QAD's extreme quality control standards, limited lifetime warranty, and exceptional customer service. Like all other Ultrarests®, the MXT is completely designed and manufactured in our own facilities in Madison Heights, Virginia.

HUNTER®

/TOUGHEST HEADS ON THE MARKET

EXODUS® broadheads are 100% designed and manufactured in the good ol' USA. The revolutionary compact head gives it the strength to bust through the toughest bones. By matching the length of a field point, the EXODUS® achieves accuracy never before experienced from a fixed blade. With razor-sharp, durable blades and a steep cutting angle, the EXODUS® tops the broadhead market in penetration. With heavy duty SST material, you never have to worry about the blades holding up as they bust through and knock down the biggest animal you dare to challenge.

PRECISION SPIN

Tight machine tolerances and quality control allow each broadhead to spin true and consistent with one another, allowing repeatable results even when changing out heads.

1.25"
CUT

BOS™

BLADE OVER SHAFT TECHNOLOGY™

The blades sweep back over the shaft, creating a super-short and compact head, just like a field point. This design allows for unmatched field point flight while maintaining extreme penetration and a wide cutting diameter.
